climada module meteorites   5 Dec 2014
https://github.com/davidnbresch/climada_module_meteorites
david.bresch@gmail.com

This module implements a basic meteorite global hazard.

There is only one code: **`climada_meteorite_hazard_set`**
and **`help climada_meteorite_hazard_set`**

Figure: The basic meterorite events (plotted as blue dot per impact, red circle for magnitude)

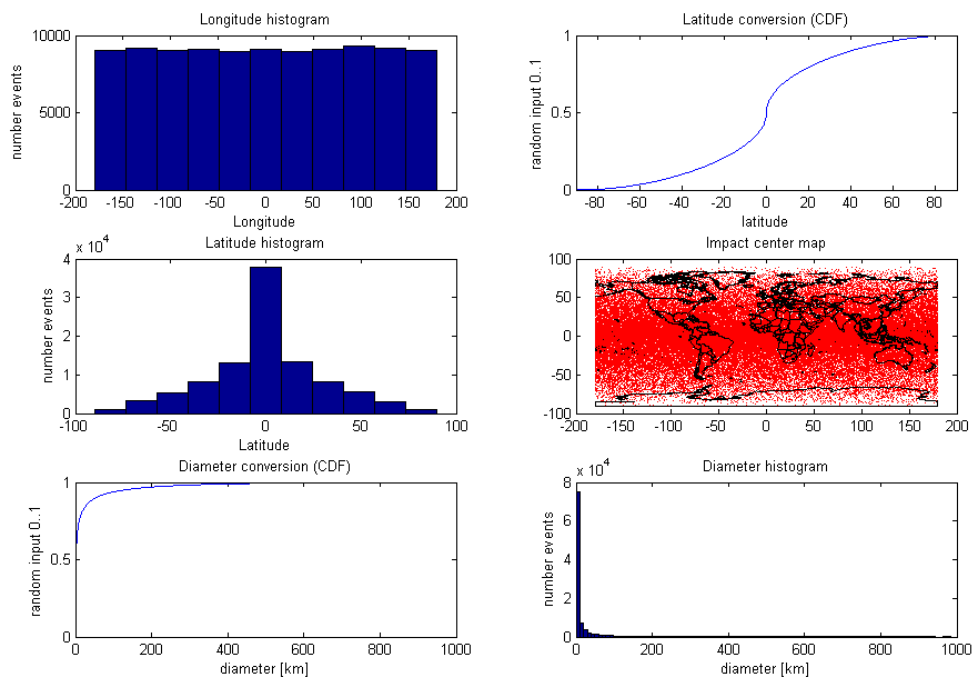

Figure: The panel as produced by the code to check for distribution of key parameters. See code for details.
